

## Get Your Device to Market Faster

with TEQ<sup>®</sup>

### When you have life-saving solutions for the global medical community, minutes matter.

You don't want unnecessary time in production or procedural programs. You want accelerated patient care and a competitive edge to better position yourself, your product and the patients who depend on you.

At TEQ, we understand that speed-to-market is crucial for both profitability and regulatory demands. That's why we have implemented a range of systems designed to ensure quick and flexible turnaround times for your drug or device packaging while maintaining the highest quality standards.

### EARLY Planning & Prioritization

As soon as you have a concept, we begin working to understand your strategy for development and deadlines. We consider the compatibility between device and packaging, the process to scale manufacturing and the type of materials required – the assembly, ways to prevent contamination, regulatory requirements and sustainability objectives. We've helped hundreds of clients manage these considerations in our decades-long experience and we're more than equipped to handle them upfront or as they arise.

### IN-HOUSE Technology & Tooling

What happens when machinery breaks down during production? The ebb and flow of manufacturing can be impossible to predict – but when something goes wrong or the unexpected happens, you'll need a quick resolution to avoid eating the cost of downtime.

Our services include an entire suite of in-house tooling and manufacturing teams equipped to troubleshoot and respond at moment's notice. We pride ourselves on this in-house expertise and our ability to provide specialized technologies and resources at times of great need.

## GLOBAL Supply & Suppliers

You often have a limited window to develop and commercialize new products. Once developed, tested and approved, you must swiftly and carefully prepare for manufacturing and distribution. The quicker you can get materials, medical thermoformed trays and other packaging needs, the better.

Our global footprint allows you to easily navigate the complex material market and acquire specific and uncommon goods outside of scope as we have long-established, personal relationships with suppliers all over the world. Our teams specialize in environmental legislation and regulations and stays current on topics that have an impact on our industry too – and you have access to their knowledge to develop the best packaging at a lower cost while meeting all design, quality, regulatory and testing standards.

## UNMATCHED Innovation & Ingenuity

TEQ has been known for world-renowned innovations – smart packaging that looks beyond the needs of today, one that plans for our future world and trends of consumers. Our products seek to enhance recyclability and functionality, leveraging the latest technologies to simulate consumer experiences, accelerate product development and deliver the highest potential for success.

Here's a snapshot of the world-class capabilities where we can deliver speed:

- Custom Design and Development
- High-Precision Thermoforming
- Rapid Prototyping
- Deep Draw Forming
- Supply Chain Management
- Clean Room Seal Tooling and Equipment

A TOPPAN COMPANY

*Global North American and European operations to serve your packaging needs*
