We manufacture our trays from PET resin to resist cracking and breaking under frozen conditions and to provide functional use as a package for reheating in both microwave and conventional ovens. PET trays provide a reliable sealing surface for a variety of films. PET trays are suitable for modified atmosphere packaging (MAP) applications with proper lidding film.

Heating Instructions

Conventional Oven

- The tray must be placed on baking sheet and positioned in the center of the oven during heating. Do not position tray on top rack or near a heating element.
- This is to provide additional support and stability of the tray to ensure the safety of the consumer.
- Placing the tray at the center of the oven allows for even heat distribution.
- The tray must be removed from oven on baking sheet and allowed to sit for 5 minutes at room temperature prior to handling.

Microwave

- Follow the manufacturer's microwave directions for specific food types.
- Allow to cool for 2 minutes prior to removing from oven.
